

# EXPOSURE ENDURO MAX

www.exposurelights.com

- 720 Lumens on MaXx
- Lightweight 230g
- Light mode indicator
- Reserve fuel tank
- "Smart" recharging
- "PiggyBack" plug in battery option
- Fuel gauge battery life indicator
- Memory free Li-ion batteries
- Hardwired batteries
- Super LED light source (lifetime warranty)
- Collimated lenses x 3 with Dual Beam Optics (DBO)
- Fully weatherproof O-Ring sealed
- CNC machined aluminium bodywork Anodised finish, Laser graphics
- Forged alloy Quick Release bracket fits 25.4mm - 31.8mm

British designed  
British made  
2 year warranty  
Multisport

### Long burn times

# EXPOSURE LIGHTS MAXX

www.exposurelights.com

British designed and built by USE, the Multi Award Winning new Exposure Lights MaXx range sets the new benchmark by which all other high output LED lights are to be judged. Exposure Lights have always believed in several simple core design principles since the first range in 2005.

**CFD - Cable Free Design** - No messy cables or separate battery packs, just one fully contained unit with serious specification and ultimate versatility. Exposure Lights are the only lights offering high Lumen outputs without messy cables and separate battery packs.

Easy to use, the new highly acclaimed Exposure Quick Release bracket fits not just the new Race MaXx and Enduro MaXx lights but also all previous models of Race and Enduro. Now with a simple one-handed, no-tools action the light can be simply clipped on and off bicycle handlebars, bringing to life the CFD principle.

**Small & Lightweight** - Why carry more than you need to? Exposure Lights' advanced technology means you carry minimal size and weight but have maximum light output with performance burn times.

**CFD**  
Cable Free Design

**Super LED** - Exposure Lights are at the forefront of the LED revolution. Exposure have never built any Halogen or HID light units always believing the future was in high output LEDs. The first company to deliver impressive lights in this category, Exposure have again raised the benchmark with the new MaXx range just as the competition are making their first Super LED offerings. Exposure's combination of the latest emitters, best batteries and highly developed electronics deliver impressive results in the dark. See what the press say opposite.

**Collimated Lenses with DBO**

Power is not everything - how you deliver that power is just as important. Exposure Lights' Dual Beam Optics (DBO) delivers both flood and spot beam patterns in a single collimated lens. Made from highly engineered plastics the lens itself uses no reflectors. Through optics design alone they efficiently direct the light from the LED emitter into a superb and very useable beam pattern. More LEDs simply add more power. The MaXx range is simple as 1, 2 or 3 LEDs.

**Super long burn times** - Up to 96hrs (on Joystick MaXx) are available from the new Piggyback battery option and so your adventure can now really begin, whatever sport you are into. Piggybacks can also re-charge your light without the need for a power socket. Genius!

Get out there and OWN THE NIGHT.

**Multi sport from the ground up** - Exposure Lights are designed with a passion for outdoors sports, in particular cycling. Designed by riders, for riders, Exposure Lights really know what makes a good light - proven by the reviews.

Night mountain bike racing has been Exposure's passion and the breeding ground for development. No other lighting brand in the UK has done as much to support events and entice more riders to explore the fun of cycling at night. Over three years Exposure sponsored events such as Kona Sleepless in the Saddle Global 24hr Series, Mountain Mayhem, Bontrager 12-24 and ACE

Races Adventure Series. Exposure also are known for innovating new events such as Merida's Exposure Lights Big Night Out and Trailbreak's MaXx Exposure night enduros.

Riders and racers choose Exposure Lights for their outstanding performance package. Winning teams include ScottUK, Giant, Magura, The North Face and Helly Hansen among the many. Exposure is also the choice of solo heroes in events such as the RAAM (Chris Hopkinson 2005, Jim Mee 2007) and South Downs Double (Ian Butler 2005, Mike Cotty 2006).

You don't have to be a racer to "OWN THE NIGHT". Today's heavier road traffic and poor road conditions mean the need for brighter and safer lights on our bikes is greater than ever for the commuter and road enthusiast.

MTB / Road / Commute / Run / Hike / Climb / Adventure / Home / Ski / Skate

**Innovation projects** - Exposure also design and make lighting solutions for Cannondale Bikes. The new HindSight integrated seatclamp light (left) and the HeadSight integrated stemlight (right).

All specifications correct at time of print but may subject to change and improvement. Check www.exposurelights.com for more detail.

**Mountain Biking UK (MBUK) magazine - on the Enduro MaXx Oct '07**

"...the beam has plenty of reach and uniform spread of natural looking light...the no-wires operation minimises faffing. A good investment." *MBUK Score 9*  
(Second only to Joystick MaXx in same test)

**Mountain Bike Rider (MBR) magazine - on the Enduro MaXx Oct '07**

"...simple cable-less design on the Enduro MaXx is fantastic, as is the sublime bar mount....output is great with easily enough light output to rip up the trails at almost daylight speeds...there's nothing to do but give it full marks." *MBR score 10/10*

**What Mountain Bike (WMB) magazine - on the Race MaXx**

"...a beam that's sufficiently powerful, with even tone and excellent breadth, that your vision towards the margins of the trail isn't compromised....an easy one-handed operation... the integral battery means there are no connections to come loose or cables to lose/leave at home...want to go all race-ready and lightweight this year, so in that case it should be the Exposure Race MaXx." *WMB Score 9*  
(Second only to Joystick MaXx in same test)

**220 Triathlon magazine - on the Joystick MaXx Oct '07**

"This fabulous new LED is light, tiny, cable-free and lives in a simple press-in/pull-out bracket...fires out clear bright central beam...giving enough depth for confidence and decent breadth too. ...great beam with excellent duration at a reasonable price - plus it's totally cable free. The fact that you can use it running too doubles it's value, making it our clear winner overall."

*220 score 9 - overall Group Lights Test Winner*

**Mountain Biking UK (MBUK) magazine - on the Joystick MaXx Oct '07**

"The best helmet light we tested by a long way.... the beam has good reach with well-graduated fade to the outside of a very broad beam that gives excellent peripheral vision....there's something liberating about grabbing a single compact unit and hitting the trail. A compact light with outstanding performance and versatility"

*MBUK score 9 - overall Group Lights Test Winner*

**What Mountain Bike (WMB) magazine - on the Joystick MaXx Oct '07**

"a lightweight minimal torch style that's easy to use either on your bars or on your helmet, clicking it in or out of it's mount in a second....just grab one small light at go makes you feel alarmingly smug and prepared. The beam is incredibly powerful for one LED. Outstanding performance, price and versatility. The overall winner. We could even stick our necks out and say if can only get one light, get the Joystick."

*WMB Score 9 - overall Group Lights Test Winner*

**Singletrack magazine - on the Enduro MaXx and Joystick MaXx Issue 38**

*Tester: Matt Letch during the MaXx Exposure South Downs 80 mile night enduro...*

"During the event I used the Enduro MaXx on the 10-hour setting and the Joystick with Piggyback battery. They were fantastic. Bright clear light and no cables all over the bars and the frame, and whilst I did have a connector attached to the Joystick, compared to the normal weight HID light with associated ballast, I didn't notice it at all....one of the lightest neatest and brightest combinations out there. We don't do points but if I did I'd give them 9/10 highly highly recommended."

**Bikemagic.com - on the Enduro MaXx and Joystick MaXx Oct '07**

*Tester: David Arthur during the MaXx Exposure South Downs 80mile night enduro...*"Exceptional design, the absence of cables and the latest LED technology make the Exposure lights a firm bikemagic favourite."
