

APPROVALS

PROTECTION IN EXTREME ENVIRONMENTS

ICON EXPLANATION

Military Ballistic Approved

This icon shows that the model is approved to the Military Fragment Test: MIL-PRF-31013. Furthermore, these models also meet ANSI requirements (opposite).

The MIL-test, which is the common name, contains all kinds of tests with fragments, in all sizes, at both high and low speed – shot against the lenses. This test is demanded by armed forces worldwide.

ANSI / EN Approved

The ANSI approval which most of Wiley X glasses possess, shows that Wiley X not only makes great designs of sunglasses, but also includes assured safety levels. ANSI Z87.1-2003 is the US safety test, which is compatible to the European EN166 test.

The test procedures which permit certification to ANSI Z87.1-2003 and EN166 are very extensive.

Models with Optical Correction

Models with this icon can be fitted with internal optical correction lenses by an optician. For PT-1 and PT-3, the strength can be from -11.00 to +11.00 (SPH). The optional RX plug-in insert is required.
